

Quanta Raises \$48 million in Series C Funding Round

~ Funds will support UK commercial launch and FDA 510(k) submission later this year ~

Alcester, Warwickshire, UK, 29 July 2019: Quanta Dialysis Technologies Ltd (“Quanta” or the “Company”), a British medical technology company developing a personal haemodialysis system (SC+) for patient use in the clinic and the home, today announces that it has successfully raised £38 million (\$48 million) in a first closing of its Series C funding round.

The round was led by a Swiss private family office in combination with btov Partners and co-led by Wellington Partners and Seroba Life Sciences, along with participation from other existing investors. Proceeds will be used to fund the UK commercial launch of SC+ and a 510(k) submission to the FDA later this year.

John E. Milad, Chief Executive Officer of Quanta, said: *“This is an exciting time for Quanta and a pivotal moment as we prepare to launch our updated SC+ personal haemodialysis system to our first commercial users in the UK later this year. We are grateful for this support from both new and existing investors, who share our vision to help more dialysis patients take greater control of their lives, both in the UK and beyond.”*

Christian Schütz, Managing Director of btov Partners on behalf of the lead investors, said: *“There are approximately 3.5 million dialysis patients globally and there has been very little innovation over the years. We are confident that SC+ will provide a much-needed solution to help health systems deliver better value for money whilst at the same time improving patients’ lives.”*

The importance of providing innovation in home dialysis is becoming increasingly imperative, as evidenced by the recently announced American Kidney Health Initiative, which aims to provide dialysis patients with greater choice and better access to home therapies. With its unique, state-of-the-art dialysis system designed specifically for patient use, Quanta is ideally positioned to harness these industry trends. About SC+

SC+ is a small, simple and powerful haemodialysis system designed to provide greater flexibility around where, when and how patients manage and receive their dialysis therapy. As a CE marked medical device, SC+ has been successfully piloted with the NHS, demonstrating clinical efficacy and performance compatible with traditional treatment regimens used in-centre. The innovative and patented technology behind SC+ is based on a design breakthrough that allows all dialysate fluid management to be conducted on a small, lightweight, disposable cartridge. The small form factor and simple-to-use design are intended to enable a broader range of users—including patients themselves—to manage dialysis therapy delivery across a wide range of settings—from the clinic to the home. Quanta will be launching SC+ later this year into a market that is increasingly seeking solutions to support patient self-care and home dialysis.

About Quanta

Quanta's mission is to improve the lives of dialysis patients through innovation. Quanta's lead product SC+ is designed to empower dialysis patients by giving them greater flexibility, convenience and control over the delivery of their life-sustaining renal replacement therapy. Quanta was founded in 2008 and is based in Alcester, UK.
