About Quanta Dialysis Technologies - quantadt.com

About Quanta and SC+

Based in the Midlands of the UK, Quanta is a technology-enabled provider of innovative dialysis products and services. Quanta aims to improve the lives of dialysis patients through beautifully engineered solutions. The lead product SC+ is a small, simple and versatile haemodialysis system designed to provide greater freedom and flexibility in the delivery of life sustaining dialysis treatments — making the therapy manageable to a broad range of users across a wide range of environments, from the ICU to the home.

SC+ is CE Marked and commercially available in the UK, where it has been successfully used to treat patients across a range of care settings, from the ICU and the clinic to the home. The innovative and patented technology behind SC+ is based on a design breakthrough that allows all dialysate fluid management to be conducted on a small, lightweight, disposable cartridge. The unobtrusive, simple-to-use and digitally connected design of SC+ is intended to empower more patients to take control of their lives with selfcare and home dialysis. Meanwhile, as a portable, compact and versatile device, SC+ provides flexibility to deliver across a wide range of use environments and prescriptions.

SC+ is not yet FDA cleared and not yet available for sale in the USA.
