About Quanta and SC+

Quanta is enabling the future of kidney care, with a mission to bring to market solutions that improve the delivery of dialysis and help people live more freely. Headquartered in the UK and with operations in the US, Quanta is a trans-Atlantic, commercial-stage medical technology innovator.

Quanta's lead product, SC+, is a small and simple, powerful hemodialysis system designed to provide greater freedom and flexibility in the delivery of life sustaining dialysis treatments. In the US, SC+ is FDA cleared for use in acute and chronic care facilities, and in the UK, it is CE marked, where it has been successfully used to treat patients across a range of care settings, from the ICU and the clinic to the home.

The innovative and patented technology behind SC+ is based on a design breakthrough that allows all dialysate fluid management to be conducted on a small, lightweight, disposable cartridge. The simple-to-use and digitally connected design of SC+ is intended to empower more patients to take control of their lives with selfcare and home dialysis. Meanwhile, as a compact, portable and versatile device, SC+ provides flexibility to deliver dialysis across a wide range of use environments and prescriptions.
